Technical Expertise

Languages: Go, C, Java, JavaScript, Rust, Python, Solidity

Backend: Microservices, REST APIs, gRPC, Distributed Systems, Message Queues

Databases: PostgreSQL, MongoDB, Redis, Database Design, Query Optimization

DevOps: Docker, CI/CD, Infrastructure as Code

Blockchain: Smart Contracts, Ethereum, Solana, Web3, DeFi Protocols

Frontend: React, Next.js, Modern Web Technologies

Experience

Ekklesia Afrika

Jul 2025 – Present

IT Consultant

Nairobi, Kenya

- Manage Google Workspace administration, overseeing 50+ user accounts and ensuring seamless collaboration across the organization
- Lead website development and maintenance projects, implementing modern web technologies to improve online presence and user engagement
- Provide technical consulting for E-learning platform development, advising on architecture, security, and scalability best practices
- Successfully integrated POS system with company website, creating unified sales tracking for online and offline transactions

LDRI

Jun 2025 - Oct 2025

Software Developer

Nairobi, Kenya

- Built a comprehensive data collection system for Nairobi-based research organization
- Designed and implemented secure data storage and retrieval mechanisms for sensitive research data
- Created user-friendly interfaces for data entry and management, improving operational efficiency

Qualiscale

Jan 2025 – Apr 2025

Software Developer

Nairobi, Kenya

- Engineered a comprehensive farm management system that transformed ODK form submissions into structured agricultural data models, enhancing operational visibility for farm managers
- Architected a robust backend service to extract, transform, and analyze farm activity data, enabling accurate tracking of planting cycles, field activities, and harvest predictions
- Developed an intuitive frontend interface and RESTful API, delivering actionable insights on crop management and increasing operational efficiency by approximately 80%

Quaint.co

Jun 2025

Web Developer

Nairobi, Kenya

- Developed a professional photography portfolio website showcasing client's work with modern, responsive design
- Implemented image optimization and gallery features to ensure fast loading and excellent user experience
- Delivered complete project from concept to deployment within tight timeline, meeting all client requirements

Bcamp

Jun 2024 – Aug 2024

Blockchain Developer Apprentice

Nairobi, Kenya

- Pioneered an innovative ERC404-based liquidity token system, merging ERC20 and ERC721 functionalities to bolster LP incentives, yielding enhanced liquidity retention
- Engineered a React-based frontend for frictionless interaction with ERC404 liquidity positions, catalyzing increased user engagement
- Streamlined gas usage for ERC404 token interactions and architected comprehensive unit tests using Hardhat, attaining 95% code coverage and mitigating post-deployment issues

Projects

Custom Shell Implementation | *C, Linux, System Programming*

- Built a Unix-like shell from scratch implementing core features including command parsing, process execution, and piping
- Developed built-in commands (cd, pwd, exit) and handled signal processing for robust terminal behavior
- Implemented job control and background process management, demonstrating deep understanding of OS concepts

Distributed Storage System | *Go, gRPC, Consensus Algorithms, Distributed Systems*

- Designed and implemented a distributed key-value storage system with data replication across multiple nodes
- Implemented consensus algorithm for maintaining data consistency in partition-tolerant distributed environment
- Built fault-tolerant architecture with automatic failover and recovery mechanisms

Rent3 - Blockchain-based Rent Management System | *Solidity, Node, EthersJS, Wagmi, NextJS, PostgreSQL*

- Spearheaded the development of Rent3, facilitating crypto-based rent payments and ensuring transparent property ownership records on blockchain
- Orchestrated and executed the entire backend infrastructure utilizing NestJS and PostgreSQL
- Seamlessly integrated Solidity smart contracts with NextJS frontend, optimizing user interactions with the blockchain

Didomi - Cryptocurrency Crowdfunding Platform | *Prisma, Rust, Anchor, Solana, Next.js, Nest.js, PostgreSQL*

- Conceptualized and launched Didomi, a decentralized platform enabling cryptocurrency-based project crowdfunding with transparent milestone tracking and automated fund distribution
- Crafted a full-stack solution leveraging Next.js, React, Nest.js, and PostgreSQL, while integrating Solana blockchain with Rust/Anchor smart contracts for secure fund management

Muve - Playlist Converter | *ReactJS, Redux, Django, REST API, Tailwind, MUI, Docker, AWS*

- Architected a playlist converter application, synchronizing YouTube and Spotify APIs using Next.js and React.js for front-end, with Django powering the back-end
- Incorporated responsive design and intricate data operations, garnering positive user feedback for its intuitive interface and seamless functionality

Education

EduLink International College

Graduated May 2025

Advance Diploma in Software Engineering

Nairobi, Kenya

- **Concentrations:** Software Engineering, Web Development, Backend Development, Frontend Development, Android Development, Enterprise Software, Software Design and Architecture, Java, PHP, SQL Databases, Project Management

Holberton School (ALX)

Graduated July 2024

Certificate in Software Engineering

Nairobi, Kenya

- **Concentrations:** Software Engineering, Web Development, Backend Engineering, DevOps, Networking, Low-level Programming in C, Bash Scripting, Linux/UNIX Systems, Data Structures and Algorithms
